CZ112 (CW712R) Technical Datasheet

Naval Brass

Applications
• Marine components
• Fasteners in corrosion resistant service
• Subsea hardware applications
• Heat exchangers
• General machined components
• High strength cold headed products

Product Description
CZ112 is commonly referred to as a Naval brass and is used typically in a wide range of marine and subsea applications. This brass alloy offers superior strength and corrosion resistance and offers good property retention at cryogenic temperatures. With excellent hot formability and very good corrosion resistance, the material is used extensively in the marine, oil & gas and petrochemical sector. The composition of the alloy, with 60% copper, 39% zinc and the important addition of 1% tin results in improved corrosion resistance and mechanical properties.

Alloy Attributes
• Improved corrosion resistance
• Better strength levels than alpha brasses
• Excellent hot formability
• Harder and stronger duplex structure

Related Material Specifications
CZ112/CW712R correspond to CuZn36Sn1Pb but may not be a direct equivalent

Machinability
The machinability of alloy CZ112/CW712R is 60 to 70% compared to CZ121/CW614N Brass which is rated as 100.

Weldability
Soldering Excellent
Brazing Good
Oxy-acetylene welding Gas-shielded arc welding Resistance welding: Spot & Seam Butt
Excellent Good Fair Good

Corrosion Resistance
Very good
