

Engineering Steel

Applications

- Automotive gears and parts
- Shafts
- Towing pins
- Load bearing tie rods
- Oil & Gas industry applications

Product Description

EN19 is a high quality alloy steel with tensile strength. With a combination of good ductility and shock resistance, EN19 is suitable for applications with very high loading such as engine gear boxes. Popular in the automotive sector it is possible to machine the material extremely accurately, in recent years EN19 has become an established material in the Oil & Gas sector. The material lends itself well to any application where strength is a primary consideration.

Hardening

High strength up to 60mm thickness

Availability

Bar.

Key features:

- High quality alloy steel
- High tensile steel
- Good ductility and shock resistance
- Good wear resistance
- Can be induction hardened

Machinability

More difficult to machine but can be machined to fine dimensional tolerances
